**Letter of Recommendation for
Mr. Rezi Sabashvili**

To whom it may concern,

As part of the first year of the Master's program in Economic Analysis and Policy, with a specialization in Statistics for Evaluation and Forecasting at the University of Reims Champagne-Ardenne, Rezi Sabashvili carried out a 7-month research project within my research team.

This work was co-supervised by both of us, Eric Bittar and Bart Lamiroy, in collaboration with Prosper Sanou, PhD candidate.

The project was part of the scientific field of Learning Analytics. It involved the theoretical understanding of scientific articles in the field and the analysis of learning data from an e-learning website.

Mr. Sabashvili presented his work in a detailed and relevant report, which was well-structured and clear, allowing for a comprehensive synthesis of the analysis he conducted.

He defended his work in a dynamic and engaging oral presentation, responding effectively and insightfully to the questions asked.

Mr. Sabashvili accomplished significant work in a proactive and constructive manner: he was able to read the research papers provided to him and synthesize them effectively for the analysis of the data he was given. He performed extensive data cleaning and understanding, working with a large and unwieldy set of information. He developed a strong understanding of the use of the e-learning platform, leading to fruitful discussions with the platform's designers about potential improvements. He was able to formulate research hypotheses and test them within a rigorous scientific approach.

His personal qualities—availability, responsiveness, and initiative—made working with him smooth and stimulating. For all these reasons, we fully recommend Mr. Sabashvili for any second-year Master's internship, particularly for a position as a Data Analyst.

Reims, July 30, 2025
